

Autoclave/Sterilizer Cleaning Services

AS THE DEMAND FOR HEALTHCARE IS INCREASING, SO ARE THE EFFORTS OF HEALTHCARE ORGANIZATIONS TO MINIMIZE COSTS. At Duraline, we provide a variety of services to ensure your organization is running as efficiently as possible all while keeping cost to a minimum. By establishing a routine maintenance schedule, we are able to keep your organization running smoothly while ensuring the safety of your patients.

Our services include

- Sterilizer cleaning
- Decontamination room cleaning
- Sterilizer loading cart cleaning
- Large-scale case cart and equipment washer cleaning
- Cart repairs for both loading and case carts
- Caster repair and replacement
- Assembly of new equipment
- Rust Removal on beds, IV poles, mayo stands and other rust prone equipment

Where infection control begins

Daily, weekly and monthly cleanings are vital for keeping your sterilizers running efficiently. However, the difficult to remove buildup that occurs over time needs to be removed to ensure the effectiveness and life expectancy of your unit. A regularly occurring deep cleaning, will remove the buildup of particles that have occurred after continuous use to restore the life of your sterilizer.

Decontamination Room Cleaning

The decontamination area is the initial location removing bioburden from soiled equipment. As the initial epicenter of cleaning, the room itself is often in need of an enhanced cleaning. Systematic cleaning of the area removes pathogens from surfaces however this cleaning is not always as thorough. An enhanced cleaning will focus on the areas that often go missed and give a deep clean to the most often used surfaces.

Why a Clean Sterilizer is Important

- Scale buildup reduces the efficiency of the heating element causing the unit to work harder and decreasing its life expectancy
- Once the buildup occurs, it can render the unit less effective in sterilizing, causing contamination with sterile packs
- Continuous buildup from hard water, mineral deposits or old filtration systems to name a few, can lead to blockage in the drainage system

With increasing safety regulations, yearly cleanings will help your organization stay compliant with your units. We will provide necessary documentation showing the units cleaned and dates completed.

Rust Removal

Equipment corrosion can be a serious hazard in a medical facility. When the protective outer layer of the surface is removed, rust can begin to form creating a health hazard and a visual distraction. This can lead to receiving citations during inspections.

A pre-inspection evaluation will allow your equipment to be serviced and brought back up to standards before your inspection.

Our rust removal services will allow you to **extend the life** of your equipment thereby **saving cost** on buying replacements.

Rust removal is ideal for equipment prone to rusting such as:

- Surgical tables
- Hospital beds
- Stretchers
- Case carts
- IV poles
- Mayo stands

Cart Repairs

Case cart and loading carts are an imperative part of daily processing operations. With daily use the signs of wear will begin to show rapidly rendering the carts less useful and more troublesome. Establishing a routine maintenance will keep your carts running at peak performance. Our maintenance will fix both common and uncommon cart issues, such as:

- Caster repair or replacement
- Misaligned loading for loading carts
- Stainless steel welding
- Corrected door alignment
- New latches

Whether you are looking to repair damaged carts or develop a servicing maintenance schedule we can ensure your carts are running at peak performance.

Sterilizer Loading Cart Cleaning

As loading carts are used simultaneously with the sterilizers the buildup of particles that occur on the carts are often a cause for concern just as it is on the sterilizer. Both the sterilizer and the loading carts endure the same strains from continuous use. Mineral deposits have a tendency to buildup underneath each rack. The buildup can then cause drips on the wraps below resulting in having to rerun a case. Creating a maintenance schedule will reduce these risks allowing the department to run more efficiently.

Assembly of New Equipment

When it is time to replace your equipment, we can assemble your pre-purchased equipment for you. Taking employees away from their main responsibilities leaves departments vulnerable for delay. With our assembly services you can focus your energy on keeping your department running efficiently.

Some Equipment We Assemble Include:

- Scope cabinetry
- Storage racks
- Case carts
- Loading carts
- Hospital beds
- IV poles
- Other OR equipment
- Track, stationary and wall mounted shelving
